SUMMARY

Innovative Android Application Developer with expertise in Java and XML, specializing in integrating on-device machine learning models (TensorFlow Lite, ML Kit) into responsive mobile interfaces. Proven ability to design secure, user-centric applications featuring seamless third-party media API integrations. Dedicated to building intelligent, scalable mobile solutions that enhance user engagement through data-driven personalization and robust, secure backend architectures (Firebase). Detail-oriented and adaptable applicant ready to assist in mobile application responsibilities.

EDUCATION

BS in Computer Science Sep 2022 - May 2026

Superior University, Lahore, Punjab

SKILLS

- **Mobile Frontend Development:** Java, XML, Android SDK, and responsive UI/UX implementation
- **Backend & Cloud Integration:** Firebase (Firestore, Realtime Database, Authentication, Storage)
- **API & Network Integration:** RESTful APIs and third-party media API integrations (Spotify, YouTube, iTunes)
- **AI & Machine Learning:** TensorFlow Lite and Google ML Kit, and emotion/face recognition engines
- **Development Tools & Version Control:** Android Studio, Git, GitHub, Gradle, Logcat, and the Android Emulator
- **Testing & Quality Assurance:** Unit testing and UI testing using JUnit and Espresso frameworks

PROFESSIONAL EXPERIENCE

Mobile Application (Intern) May 2026

Innoviast, Johar Town Lahore

- Developed scalable mobile applications using Figma, Java, and React Native, delivering high-performance client solutions.
- Collaborated cross-functionally to design and optimize application performance.
- Developed and tested new mobile app features under senior guidance, assisted with debugging and troubleshooting mobile applications for stability.
- Integrated APIs to support dynamic content within mobile applications.

Mobile Application Development (Intern) 16 Jul 2026 - Present

Mktecknotrons, PIA Lahore

- Built at least four complete Flutter applications using Dart, Firebase, and RESTful APIs.
- Implemented responsive UI, authentication, APIs, and backend integrations in Flutter.
- Debugged, tested, and optimized Flutter applications for stability and performance.

PROJECTS

MoodMuse AI Music Recommendation App

Technologies: Figma, XML, Java, Firebase, API Integrations, ML Models

- Developed an emotion-based AI music recommendation app on Android Studio, which detects facial emotions and generates a song list based on those emotions.

SwiftTrack Railway Ticketing Application

Technologies: Figma, Flutter, Dart, Firebase (Auth, Firestore), RESTful APIs, JSON, National Rail Data Marketplace, Darwin, Transport API

- Developed a fully working Flutter railway ticketing clone of the Heathrow Express app.
- Integrated real-time REST APIs for railway timetables, platforms, service status, and journey data.
- Connected Firebase for authentication, Firestore data, and dynamic booking and ticket workflows.
